Description

Integrated filtration solution for the UltiMaker S5 3D printer, providing optimized airflow settings for all UltiMaker filament. Removes up to 95% of all ultrafine particles (UFPs) emitted during 3D printing.

The UltiMaker S5 Air Manager improves the 3D printing workflow and efficiency. With a connected Air Manager, the UltiMaker S5 is enhanced with the following features:

- **UFP filtering:** the Air Manager encloses the top of UltiMaker S5 and ensures an inside-out airflow. The air passes through an E10 filter whereby Ultrafine Particles (UFPs) get trapped.
- **Optimized material compatibility:** the Air Manager will automatically adjust its fan speed to optimize print quality per material.
- **Physical barrier:** the enclosed top prevents users from reaching into the machine during operation and ensures particles from the environment do not influence the print result.

The Air Manager, together with the Material Station and the UltiMaker S5, form the UltiMaker S5 Pro Bundle. The Air Manager can also be installed on an UltiMaker S5 without a Material Station.
